

Configuration

1. Login to the ResellerClub control panel (the url will be in the email you received when you signed up with them) and then go to **User Profile > Manage Profile** - the value you need to note is the Reseller ID.
2. Still in the ResellerClub control panel, go to **Settings -> API** and enter the IP address of the server where WHMCS is installed to authorize it for API access
3. On the same page, note down the API Key.
4. Now, login to your WHMCS Administration Area
5. Go to **Setup > Products/Services > Domain Registrars**
6. Choose "Resellerclub" in the registrar dropdown menu and enter both the **Reseller ID** and **API Key** noted above.
7. Then click Save Changes
